

BLUEWAVE

UVC DISINFECTION ROBOT

INDEPENDENTLY VALIDATED.

**DESTROYS
CORONAVIRUS**

BLUEWAVE

Bluewave is a mobile hospital-grade disinfection system that utilises Ultraviolet-C technology to inactivate microorganisms typically found on surfaces in hospital and aged care settings.

Designed and manufactured in Australia, Bluewave is a safe, efficient and cost-effective technology that has been proven to reduce the number of hospital acquired infections (HAIs).

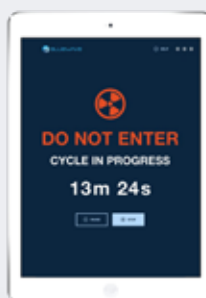

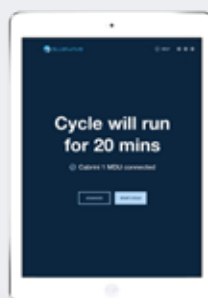

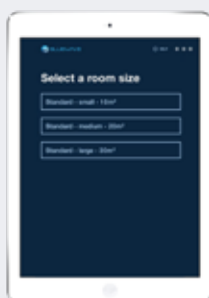

The ergonomic dolly allows the operator to safely manoeuvre Bluewave through the hospital with minimal effort.

The dolly also detaches from the unit and is placed at the entrance of the disinfection location to deny access during the cycle.

Bluewave is operated remotely via a simple and intuitive app (tablet included).

Minimal Operator training is required.

PROVEN TECHNOLOGY

- Ultraviolet germicidal irradiation is a proven method of eliminating the presence of a wide range of pathogens (such as coronavirus) from environmental surfaces
- Proven to kill bacteria, viruses and fungi
- Independently tested and validated

COST EFFECTIVE

- We proudly offer the cheapest medical-grade UVC disinfection robot on the market, which is approximately 50-75% cheaper than other competitors available in Australia
- Fitted with long-lasting, low cost bulbs which helps keep maintenance costs down

HIGHLY EFFECTIVE

- Rapid delivery of powerful UVC effectively treats surfaces within minutes
- Constant exposure from floor to ceiling in a 360-degree radius with limited shadowing

SAFETY FEATURES

- Emits no ozone and is completely eco-friendly
- Remotely operated from outside the room via tablet
- Includes a bollard which is placed at the entrance to deny access to the treatment location during the disinfection cycle
- Bluewave's motion sensors instantly disrupt the cycle when human presence is detected, ensuring staff, patient and visitor safety
- Emergency trip switch
- Auto-initialised transportation mode to prevent WHS related injuries

ERGONOMIC DESIGN

- The bollard placed at the entrance as also serves as an ergonomic dolly to safely manoeuvre Bluewave through the hospital
- Robust and sturdy frame yet highly portable

EASE OF USE

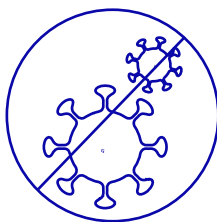

- Simple and intuitive design
- Minimal operator training required

REPORTING

- A summary report is automatically created upon completion of each cycle, which lists the operator, date, time, location, output power and cycle status
- Reports are accessed via the Bluewave web portal

PROUDLY AUSTRALIAN

- Locally designed and manufactured in Australia
- Supported by our technical service teams across our 20 Australian offices, boasting a presence in all states and territories
